# VULNERABILITY MANAGEMENT

Vulnerability management is the constant assessment, evaluation, repair, and reporting of vulnerabilities that allow security vulnerabilities to be managed and addressed daily. This continual process discovers weaknesses more quickly, allows the issues with the highest impact to be addressed first and fewer vulnerabilities get overlooked.

Know where you are exposed

Our continual process quickly detects unknown exploits in your network, devices, servers, web applications, databases, or other assets. Our specialists help you get ahead of the threat by exposing weaknesses and eliminating potential threats before hackers can expose them.
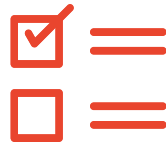

Prioritize vulnerabilities with context

With contextual vulnerability prioritization, we close the gaps in your environment by understanding the risk posed by vulnerabilities. We take into account the unique context of your organization and an understanding of where exploitation can cause the most damage. We also reduce vulnerability remediation efforts by prioritizing based on the latest threat intelligence.

Highly trained, experienced, & certified security professionals

Blue Team Alpha's certified security professionals use a holistic approach to identifying, reporting, assessing and prioritizing exposures. We also use the latest updates and prevention processes to provide our clients with the highest security posture possible.

VULNERABILITY MANAGEMENT

Level 1

- Co-managed vulnerability management tooling
- Monthly internal credentialed and uncredentialed scanning
- Monthly external uncredentialed scanning of infrastructure hosts

(Web Application Scanning sold separately)

Level 2

Everything in level 1 and...

- Analysis and prioritization of identified vulnerabilities
- Vulnerability management program documentation
- Organization and participation in client vulnerability management meetings
- Monthly vulnerability program review
- Vulnerability management policies and documentation

Level 3

Everything in level 2 and...

- Hands-on-keys remediation assistance
- Adherence to client's change control processes and cadence

Get Ahead of the Threat. Find Your Vulnerabilities Without the Downtime.

Put an ELITE, Highly Trained Team on Your Side

Our team consists of tenured cybersecurity professionals with the knowledge and certification to help you improve your security posture.

Certifications:

Certified Ethical Hacker

GIAC Penetration Tester

Offensive Security Certified Professional

Certified Information Systems Security Professional

GIAC Certified Incident Handler

Certified Red Team Operator
